DISPOSABLE GUIDE WIRE

Operated under an endoscope to guide an instrument into a cavity or tissue.

- Ultra-smooth hydrophilic head, small friction at the head end of guide wire and smooth intubation.
- Various specifications and models are available: the diameter is 0.025/0.035inch and the head end is straight /J-shaped.
- Wavy surface design, small friction of instrument exchange.
- Anti-twist Niti alloy inner core provides excellent torsion and pushing force, Super elastic Ni-Ti alloy mandrel with excellent push and pass ability.
- Tapered design head enhance the flexibility intubation and operation success rate.
- Smooth head end prevent mucosal tissue damage.

Much **smaller friction** force leads higher smoothness and better passability as diameter about 0.78mm is smaller than other supplier.

The raw material **PTFE** pattern pipe is imported from US.

Good cornering performance and easy to jack with a **flexiable spring** in the head end.
